

Iskandar Boukhenoufa

Junior Machine Learning Engineer & Full Stack Developer

Email: iskandarboukhenoufa23@gmail.com

Phone: +213676067172

GitHub: github.com/iskan-dar05

Professional Summary

Motivated Junior Machine Learning Engineer and Full Stack Developer with experience building AI-powered applications, SaaS platforms, mobile apps, and scalable backend systems. Skilled in machine learning, deep learning, MLOps, React/Next.js development, FastAPI, and cloud-integrated architectures. Passionate about artificial intelligence, data engineering, and building production-ready systems.

Education

Bachelor's Degree in Information Systems and Software Engineering

Focused on software engineering, machine learning, backend development, and modern web technologies.

Technical Skills

Programming: Python, JavaScript, TypeScript, C, C++, PHP

Frontend: React, Next.js, React Native, Ionic Vue, TailwindCSS, Vuetify

Backend: FastAPI, Node.js, Express.js, Laravel, REST APIs

Machine Learning & AI: PyTorch, TensorFlow, Scikit-learn, Deep Learning, NLP, LSTM, Random Forest, RAG Systems, Sentence Transformers

Databases: PostgreSQL, MongoDB, Supabase, FAISS, Firebase

Data & MLOps: MLflow, MinIO, Docker, Data Pipelines, Time-Series Forecasting

Authentication & Tools: Clerk Auth, Git/GitHub, Linux, Socket.IO

Projects

Stock Ocean – Digital Asset Marketplace

Built a full-stack SaaS platform using Next.js and Supabase for selling digital assets with subscription plans, contributor management, admin dashboard, and secure user authentication.

Hotel Booking System (MERN Stack)

Developed a hotel reservation platform using React, Node.js, Express, and MongoDB with real-time chat using Socket.IO, booking management, and admin dashboard.

Error Solution – AI RAG Assistant

Created a React Native mobile application with FastAPI backend using FAISS vector search and RAG architecture to help developers analyze and solve programming errors.

Stock Prediction System

Designed an ML-powered stock prediction pipeline using LSTM and Random Forest models with MLflow experiment tracking, MinIO data lake storage, and Dockerized deployment.

Fraud Detection System

Implemented a multi-model machine learning system for fraud detection and anomaly analysis using feature engineering and classification techniques.

Languages

Arabic (Native), English (Professional Working Proficiency), French (Intermediate)
